## Reheat drumsticks in air fryer

Collect the ingredients. The Spruce Eats / Leah Maroney Preheat the air fryer to 350 F. Place about 6 strips of bacon over the air fryer. For flatter bacon you trim it to fit exactly in the basket. If you don't mind the bacon curling, you just have the longer pieces and the edges will roll. The Spruce Eats / Leah Maroney Cook for 8 to 10 minutes or until the bacon is crispy. If you want the bacon to be less crispy you give it a minute earlier. If you like it crispier then leave it in for an extra minute. The Spruce Eats/Leah Maroney If you use a thicker cut of bacon then leave it in for a minute or two longer. You can pause the air fryer as much as you want to get the bacon to your ideal form. After you have finished cooking the first batch, make sure to pour some of the fat out of the bottom of the air deep fryer. This will help prevent excessive smoking. The bacon becomes super crunchy in the air fryer, so it's perfect for making bacon pieces. Simply crumble the chilled bacon over a bowl or in a plastic bag. Use the bacon pieces to top on pastas, pizzas, or baked potatoes. If you want to try something new, you can make candied bacon! Dip both sides of the bacon in a brown sugar, and seasoned salt mixture. (A 1/4 cup brown sugar and a teaspoon of spiced salt), then cook as usual. Make sure you pause and check for the bacon halfway through to check it before burning! The sugar can burn more easily than the regular bacon. Rate this recipe I don't like this at all. It's not the worst. Sure, this will do. I'm a fan- would recommend it. Amazing! I love it! Thank you for your appreciation! The Insider Picks team writes about things we think we like. Simple Taste/Business Insider The Insider Pick: According to Kitchen Weapon, Philips was the first to introduce the air fryer in 2010. Since then, dozens of brands have come on the market with their own version of this innovative device. Air fryers using the Maillard reaction. In case you weren't well versed in early 20th-century chemistry, the Maillard reaction is a chemical reaction between reducing sugars and amino acids that give a distinctive flavor to brown foods. With traditional fryers this is achieved by dipping the food in hot oil. On the other hand, air fritieuses achieve the same reaction by using a mechanical fan to circulate hot air at high speeds around the food. The result is fried food that consumes up to 80% less oil. In fact, most recipes simply ask for a few syringes of spray oil. When shopping for an air fryer, there are a few features that set them apart. Digital air fries are generally more expensive, but they are a must for accurate cooking. Many models come with dishwasher-safe components that make cleanup easy.
